

PACKAGING MACHINERY
BAKERY AND PASTRY

DECADES OF EXPERIENCE

At YM Packaging, we have **over 20 years of experience** in the **packaging industry**, providing **customized and efficient solutions** for the **bakery and pastry sector**, as well as for **sweets such as chocolates and nougat**.

We specialize in the development of **automated machinery** tailored to the **specific needs** of each business, ensuring **continuous and high-performance production**. Our range of equipment covers **everything from production processes**, such as **chocolate enrobers and injectors**, to **packaging, cartoning, and palletizing machinery**

CHOCOLATE INJECTORS

Designed to inject chocolate or other liquids into croissants, donuts, and pastries in general.

The machine is operated through its **touchscreen**, allowing **full control** over the injection process. Its **servo-driven system** ensures **precise product dosing**, regulating both the **quantity and injection speed**. This allows adaptation to different **product types and production needs**.

The injector is equipped with a **tempered hopper** that keeps the product warm, preventing solidification and ensuring a **uniform application**.

Its injection capacity can reach **up to 20 pieces per minute**, depending on the type of product.

CHOCOLATE ENROBERS

Designed to **evenly coat pastries with chocolate**, ensuring a **homogeneous finish**. Our chocolate enrobers feature **temperature control systems** and **flow adjustments**, which allow for **precise regulation of the chocolate flow** to accommodate various production requirements.

Thanks to their **versatile design** and **advanced features**, YM Packaging's chocolate enrobers are the ideal solution for production lines seeking **high quality, efficiency, and control** in the coating process.

SHRINK TUNNELS

Designed to adapt to different product sizes and formats, thanks to their **temperature and transport speed regulation**. This allows them to be adjusted to the specific needs of each production line, ensuring **efficient shrink-wrapping** without compromising the integrity of the product. The **integrated ventilation system** in the shrink tunnels ensures a **uniform heat distribution**, preventing bubbles or wrinkles in the film

At **YM Packaging**, we offer **shrink tunnels with advanced technology**, guaranteeing **optimal performance** and **complete adaptability** to various production volumes and product types.

Our machinery is designed to **maximize efficiency** and **minimize material waste**, contributing to a **more sustainable and cost-effective packaging process**.

ULTRASONIC CUTTERS

Using **ultrasonic technology**, these machines ensure **clean and precise cuts** without **deforming or damaging the structure of the product**, making them **ideal for fragile or filled products**.

Particularly useful for cutting **nougat, cakes, fresh dough, and multi-layered products**, these cutters guarantee **high-quality presentation** of the final product.

This cutting system uses a **guillotine**, enabling it to cut **large-sized products** with **precision** and achieve up to **45 cuts per minute**, depending on the characteristics and consistency of the product.

Its operation **significantly reduces the amount of waste** generated during the cutting process, optimizing raw materials and **enhancing production profitability**.

FLOWWRAPPER MACHINES

Flowrapper machines are an **ideal solution** for the **bakery, pastry, chocolate, and nougat industries**, allowing for the **individual or multipack packaging** of a wide variety of products. Their technology ensures an **airtight seal** that preserves the **freshness, texture, and flavor** of the products, **extending their shelf life** and enhancing their presentation at the point of sale.

YM PACKAGING's Flowrapper machines deliver **high speed and precision** in the packaging process, optimizing **production efficiency**. They can operate with a variety of packaging materials, such as **barrier films, biodegradable, and recyclable materials**, contributing to the sustainability of the production process.

VERTICAL PACKAGING MACHINES

Vertical packaging machines are an **efficient and versatile solution** for packaging products in the **bakery, pastry, chocolate, and nougat industries**. This type of machinery is ideal for packaging **powdered, granulated, or solid products** in various bag formats, ensuring **precise and secure packaging**.

In the **bakery and pastry industry**, these machines enable the packaging of **flour, pastry mixes, sugar**, and other essential ingredients in formats that facilitate their commercialization. For more delicate products such as **chocolates or muffins**, vertical packaging machines ensure **careful handling** that preserves their **quality and presentation**.

They can be integrated with **date and barcode printers**, ensuring **complete product traceability** in the market.

AUTOMATIC FILLING MACHINES

YM Packaging's filling machines are designed for the **precise dosing and packaging** of products in **cups, jars, or bottles**, making them ideal for the **bakery, pastry, chocolate, and nougat industries**.

Our filling machines can handle a **wide variety of products**, ranging from **solids** such as chocolate chips and bonbons, to **semi-liquids** like cocoa creams and pastry fillings, and **liquids** such as syrups. Each machine is engineered to ensure **accurate dosing** while preventing **spills or waste**, delivering **efficient and high-quality packaging**.
